Steel sump pallets for drums

VEF

Platform for the storage of drums with watertight collection tank.

All collection tanks are made of carbon steel with thickness 30/10.

The weldings are electronically controlled.

The dimensions and the dimensions are all realized according to the UNI parameters.

For the creation of your tanks we use a hot-dip galvanized technical grill.

Model available also galvanized.

Our tanks comply with the current legislation; they require that the tanks contain at least the volume of the largest drum stored and 33% of the total liquid stored.

In case of storage of exhausted oil, the tank must have a volume equal to 100% of the stored oil.

The storage of substances and their transfer must be carried out scrupulously following the indications contained in the safety data sheets of the individual substances.
